Description

Extended product overview

Lush colours and excellent picture quality for your home cinema

Light technology: 245 watt Osram UHP Resolution: 1080p Full HD (1,920 x 1,080 px) Brightness: 4,500 (standard), 3,600 (eco) ANSI lumens Contrast: 10,000:1 Lifetime max (hrs.): 4,000 (standard), 10,000 (eco), 20,000 (ecoPro) hours

Acer LumiSense Acer LumiSense technology uses an ambient light sensor to detect the brightness in the projection environment and optimally adjust brightness and colour saturation accordingly. In addition, Acer LumiSense also analyses the projected image and dynamically optimises the quality of the displayed image.

Auto Shutdown The Auto Shutdown function automatically shuts down the Acer projector if no input signal is received after a reset time. This function is individually adjustable via the menu and helps to save power and lamp power.

Wall Color Compensation Wall Color Compensation: The best picture quality is achieved with wall colour correction on coloured projection surfaces such as blackboards and wallpaper. 5 optimised wall colours can be compensated easily and without further settings via the menu for best picture quality.

HDMI 3D HDMI 3D: The integrated HDMI 1.4a standard enables the transmission of 3D content from suitable playback devices, such as 3D Blu-ray players, 3D set-top boxes and 3D game consoles, without the need for an additional PC. With the help of the Acer 3D shutter glasses, Bluray 3D movies and 3D TV broadcasts can be displayed in your own living room up to a diagonal of 7.62 metres (300).

Low input lag 16ms You value detail? Thanks to low input lags are a thing of the past. Whether you're gaming on the big screen or watching the latest action film - you're always at eye level and get every detail without judder.

24/7 use This projector promises maximum reliability and reliably delivers a brilliant picture even in 24/7 continuous use.

Bluelight Shield BluelightShield allows users to lower the blue light level to reduce the negative effects of blue light exposure. There are three filter levels in the projector to suit different scenarios. Each level also contains a dynamic mechanism that optimises the blue light level depending on the content. BluelightShield can reduce up to 30% blue light and protect your eyes.

Customizable Startup Screen The Customizable Startup Screen allows you to create a custom startup screen via screenshot. This startup screen, whether it is the company logo for a business user or the favourite photo of a home user, is automatically displayed when the projector is started.

Automatic keystone correction Thanks to the automatic vertical keystone correction, the Acer projectors automatically compensates for the trapezoidal distortion if the projector is not set up exactly vertically and projects a fairly angular image.

Auto Ceiling Mount Correction Auto Ceiling-Mount Correction: The built-in gravity sensor in the Acer projector detects when it has been mounted overhead on a ceiling and automatically rotates the projection 180° without any additional settings in the menu.

HDMI Power On With the HDMI Power On function, the projector is able to switch on automatically as soon as the projector receives a signal via HDMI or VGA. You no longer need to start the projector separately, but can simply switch on your notebook, receiver or game console and the projector will automatically switch on as well.

AC Power On With the AC Power On function, the projector is able to switch on automatically as soon as the projector is supplied with power. You no longer need to switch on the projector separately but can start it directly, e.g. by switching on the power in the meeting room.

Wireless projection Acer Wireless Projection: Never lay cables again! The Acer Wireless Adapter (sold separately) allows you to project wirelessly and saves you the sometimes laborious laying of HDMI or VGA cables.
