Description

Extended product overview

Projection is made easy with an Acer P1557KI projector. Project all your content with 4,500 lumens, FHD resolution, and Acer BlueLightShield™ eye-protecting technology. Key Features: Resolution: 1080p Full HD (1,920 x 1,080 px) Brightness: 4,500 (standard), 3,600 (eco) ANSI lumens Contrast: 10,000:1 Lifetime max. (hrs.): 4,000 (standard), 10,000 (eco), 20,000 (ecoPro) Auto Shutdown Warranty: 5 years The Auto Shutdown function automatically shuts down the Acer projector if no input signal is received after a preset time. This function can be set individually via the menu and helps to save power and lamp hours. Original 24p playback Experience true cinema with 24 frames per second, the Acer projector plays back Blu-Ray films in the original cinema format without judder, just as it was shot on the film set. See movies at 24p through the eyes of the director. Wall Color Compensation Wall Color Compensation: Best picture quality enables wall colour correction on coloured projection surfaces such as blackboards and wallpaper. 5 optimised wall colours can be easily compensated for without any further settings via the menu for best picture quality. Installation menu With the help of the installation menu, the Acer projector can be perfectly aligned with the surface to be projected without spending much time. The installation menu can be accessed by pressing the menu button even if no source is connected to the projector. Acer Smart Format Technology Acer Smart Format Technology supports a variety of input signals, eliminating the need to switch between notebook/PC, DVD player and receiver. Signals up to 1080p can be accepted and compressed for Acer ColorBoost projectors with HDMI using Acer Smart Format technology. Model-dependent HDMI 3D HDMI 3D: The integrated HDMI 1.4a standard enables the transmission of 3D content from suitable playback devices, such as 3D Blu-ray players, 3D set-top boxes and 3D game consoles, without the need for an additional PC. With the help of the Acer 3D shutter glasses, Blu-ray 3D films and 3D TV programmes can be shown in your own living room up to a diagonal of 7.62 metres (300). Low input lag 8.3ms Do you value detail? Thanks to low input lags, lags are a thing of the past. Whether you're gaming on the big screen or watching the latest action movie, you'll always be at eye level and get every detail without judder. BlueLight Shield BlueLightShield allows users to lower the amount of blue light to reduce the negative effects of blue light exposure. There are three filter stages in the projector suitable for different scenes. Each stage also contains a dynamic mechanism that optimises the blue light level depending on the content. BlueLightShield can reduce blue light by up to 30% and protect your eyes. Automatic Keystone Correction With the Automatic Vertical Keystone Correction, the Acer projector automatically compensates for keystone distortion when the projector is not positioned vertically exactly and projects a fairly angular image. Top Loading Lamp Design The Top-Loading Lamp Design offers easy lamp replacement for overhead ceiling installations via the top of the housing without having to separate the Acer projector from the mount. The replacement is similar to changing an energy-saving lamp. AC Power On With the AC Power On function, the projector is able to switch on automatically when power is supplied to the projector. You no longer need to switch on the projector separately, but can start it directly, e.g. by switching on the power in the meeting room. Acer Color Safe II Acer ColorSafe II guarantees a consistent, brilliant and natural colour projection over the entire projector lifetime. This is guaranteed by the use of DLP® technology and a 5-year warranty on the DLP® chip. For projectors without DLP® technology, the colour brilliance will decrease over time.
