Extended product overview

The Hisense L9Q Trichroma laser TV projector is a milestone for modern home cinema, setting new standards and effortlessly solving the classic challenges of conventional projectors. Do you dream of a gigantic, razor-sharp picture without a bulky television? Would you like to enjoy a perfect picture even in daylight without darkening the room? Then the L9Q is the ideal choice to transform your living room into a true cinema. Its innovative technology and groundbreaking features offer a viewing experience that will thrill you. Highlights of the Hisense L9Q Laser TV Projector: Breathtaking 4K Picture Quality: Enjoy razor-sharp images and the finest details thanks to native 4K UHD resolution (3840 x 2160 pixels) and intelligent 4K upscaling. Vivid Colours Even in Daylight: The unique Trichroma Laser Technology generates colours via separate lasers, enabling outstanding colour reproduction with 110% of the BT.2020 colour space. Immersive Cinema Audio: An integrated 6.2.2 sound system from Devialet with Dolby Atmos and 116 watts of power delivers a professional, room-filling soundscape. Outstanding Brightness: With 5,000 ANSI lumens, the Hisense Laser TV delivers an impressively bright picture that shines even in non-darkened rooms. Intuitive Operation and Connectivity: The customisable VIDAA user interface and a wide range of connections such as HDMI 2.1, USB 3.0, and Bluetooth make it easy and flexible to use. Detailed Features for Your Perfect Experience Trichroma Laser Technology: Colours You Can Feel What sets the Hisense L9Q Laser TV apart from many other projectors is its Trichroma Laser Technology. While conventional projectors often produce colour mixing using a single laser light, the L9Q uses separate lasers for red, green, and blue. The result: exceptionally accurate and lifelike colour reproduction covering 110% of the BT.2020 colour space. With this technology, even the smallest details appear vivid, skin tones authentic, and landscapes spectacular. The colour accuracy is so high that it has even been validated by Pantone – proof of absolute top quality. Unique Sound Experience with Devialet An outstanding picture deserves equally outstanding sound. The Hisense L9Q scores with a professional sound system developed in cooperation with the audio brand Devialet. The integrated 6.2.2-channel system with Dolby Atmos offers an impressive 116 watts of power that fills the room with powerful sound. This is no ordinary speaker, but a complex system that delivers deep bass and clear treble for a truly immersive sound experience. You'll hear rain coming from the right direction or feel the roar of an explosion – just as if you were right in the middle of the action. Brightness, Flexible Image Size, and Easy Installation The Hisense L9Q masterfully overcomes the biggest challenge facing conventional projectors: the interplay between brightness and ease of installation. With an impressive 5,000 ANSI lumens, the image is 70% brighter than its predecessor, which, combined with the 5000:1 contrast ratio, ensures brilliant, detailed images. For you, this means that even in a light-filled living room, you no longer need to close the curtains to enjoy brilliant picture quality. The unique adaptability goes hand in hand with the ultra-short throw ratio of 0.18. This technical feature allows the projector to be placed directly in front of the wall. This saves you complicated ceiling installations and the search for the perfect position in the room. At the same time, you can seamlessly adjust the screen diagonal from 80 to a gigantic 200
