Description

Extended product overview

Description The PS502X projector is perfect for business and education settings, with its high-brightness XGA and short-throw design. It boasts an impressive 4,000 ANSI Lumens, ensuring clear and vibrant images in even the brightest of spaces like meeting rooms and classrooms. Additionally, the projector's short throw ratio of 0.616 allows for a large 100" screen size to be projected from just 1.3m away, making it ideal for small spaces where the presenter can avoid obstructing the view or causing shadows on the screen. The PS502X comes with two HDMI ports, making it easy to connect to various devices. Switching between sources is hassle-free as there's no need to unplug existing devices. Additionally, the USB Type-A port can power HDMI wireless dongles, making wireless content streaming more convenient. With its high brightness of 4,000 ANSI Lumens, the PS502X ensures clear visuals even in environments with a lot of ambient light. This makes it well-suited for business and education settings where brightness is crucial. Despite its compact size, the projector allows for an image size of up to 300", making it a more cost-effective solution compared to commercial displays. It provides a larger screen size for easier installation and better visibility. The PS502X offers easy and flexible connection options with its dual HDMI ports. The on-screen display allows you to conveniently select and change the input source without the need to unplug and replug devices. ViewSonic's exclusive colour technology ensures vibrant and captivating presentations with true-to-life colours. This enhances the visual experience and helps leave a lasting impression on your audience. Updating the projector's software is made simple with the PS502X. You can easily keep the software up to date by connecting your laptop via a USB cable, eliminating the need for trips to service centres. The projector also features a built-in 5V/1.5A USB power output, which can supply power to HDMI wireless dongles. This eliminates the need for separate power adapters when streaming multimedia content wirelessly. For audio during presentations, the PS502X comes equipped with a 16W speaker. This allows for audio to be delivered without the need for external speakers, providing a convenient all-in-one solution. Overall, the PS502X is a high-brightness short-throw projector that offers clear visuals, flexible connectivity options, vibrant colours, and convenient features for business and education environments.

Specifications
 Projector Number of colours 1.07 billion colours
